KOMET® Ceramic Cutters for Acrylics: High-Performing Alternative to Tungsten Carbide

KOMET® Ceramic Cutters feature high-performance ceramic cutting heads for trimming and shaping a full range of acrylic materials.

When compared to traditional tungsten carbide cutters, the KOMET® instruments are engineered to reduce clogging and to generate very little heat if used properly. Additionally, the ceramic blades stay sharp for an extended period,

particularly when used in clinical settings in which repeated steam sterilization is required.

KOMET® Ceramic Cutters are offered in two popular shapes with distinctive blade configurations: The tapered K79GSQ is recommended for soft and flexible partial acrylics, and the convex-shaped K251ACR is ideal for hard denture acrylics, nightguards, and trays.

**Buy 2 Ceramic Cutters,
Get 1 FREE pack of**

9485M Abrasive Buff Polishers

for smoothing difficult-to-trim acrylic surfaces (retail value, \$27.50)
